Subject: Letter of Recommendation

Dan Mulroy and the crew from Tech Ambassadors are outstanding. We enthusiastically recommend them.

We needed a whole house audio/video system for a home we re-built in 2012. Given the horrible audio/video experience we had five years prior with another company, we were hesitant to move forward. Dan was the perfect remedy. He spent hours talking with us about our specific needs, offering several options for how we could stay within budget yet have a system we love. His level of knowledge about all things electronic is unsurpassed. We interviewed three or four other companies before selecting Tech Ambassadors.

Finding space for speakers in our kitchen ceiling that was dotted with LED cans, skylights and HVAC vents was a challenge; Dan suggested invisible speakers. We were skeptical but decided to give them a try given Dan's keen instincts.

As the owner/builder contractor, I had the pleasure of observing the installation. As promised, they function beautifully and are seamlessly hidden in the drywall ceiling. A designer and homeowner's dream.

From the contractor's perspective, Tech Ambassadors were one of the best subs I worked with. They arrived on schedule, completed what was expected, got along well with other subs and clearly enjoyed the work they were doing. They were a pleasure to have around.

What sets Dan, Mike and Shelby apart from others is their customer service. Their goal was to install a fabulous system in our house and then provide the customer service required for us to enjoy it. We text or email them regularly with questions; they get back to us immediately.

Thank you Dan, Mike and Shelby for the great work. It's a pleasure working with you.

These are some of the main components Tech Ambassadors used in the design of our system. We're enjoying all of them; particularly given they returned items that we changed our mind about or weren't working properly.

Crestron Automation System for controlling Audio and TV functions and Doorbell
Video Matrix Switch - able to access same sources in all rooms.
RTI handheld remotes
Stealth Acoustics invisible speakers
